

Serverless Project Deployment Architecture

Static Frontend + REST API + Lambda + DynamoDB

Request Flow

- 1 User accesses the application via custom domain (Route 53).
- 2 Request is secured with SSL (ACM) and filtered by WAF.
- 3 CloudFront delivers static frontend files from S3.
- 4 Frontend makes API calls to API Gateway (HTTPS).
- 5 API Gateway routes requests to the appropriate Lambda function.
- 6 Lambda functions read/write data to DynamoDB table.
- 7 Response is returned back to the user.

Key Features

- ✓ Serverless Architecture
- ✓ Highly Scalable
- ✓ Secure (ACM + WAF)
- ✓ Global CDN (CloudFront)
- ✓ Pay-as-you-go
- ✓ No Server Management

Technologies Used

- Amazon S3 (Static Hosting)
- Amazon CloudFront (CDN)
- Amazon API Gateway (REST API)
- AWS Lambda (Compute)
- Amazon DynamoDB (Database)
- AWS WAF (Security)
- AWS Certificate Manager (SSL)
- Amazon Route 53 (DNS)

API Endpoints

- POST /employeeData**
- Inserts new employee data
-
- GET /employeeData**
- Retrieves employee data

Database Details

Table Name: employeeData
Primary Key: employeeid (String)
